

**Mens Beginner FULL BODY
UPPER LOWER SUPERSETS
3 x Per Week**

1 Year Of Programming

This is a year of programming for a 3 times a week Full Body Programme for men.

Goals Of Program:

Designed to aesthetically improve your body composition and build a strong, pain free base for sports or everyday life, with good posture.

Training Approach:

This program uses a time saving UPPER LOWER superset approach where upper body exercises and lower body exercises are paired together without rest, in order to maximise time efficiency.

The UPPER LOWER approach is common in industry leading body composition gyms, to allow busy professionals to speed through effective muscle building FULL BODY workouts within an hour. Most professionals are busy and only have this time to spare.

Who Is This For?

If you want to work out 3 times a week and build a stronger and better looking body, this is for you.

If you are a busy professional looking for a general purpose, time effective program to build your body, this is for you.

If you are looking to be strong, pain free, work on your posture, and build a strong foundation, this is for you.

This upper lower full body style is time efficient, and will build a strong foundation for sports or everyday life. You can use these workouts as a practitioner of sports to build foundational strength, muscle and posture that will help you further in your sport.

Or if you don't do sports and are simply looking to improve the way your body looks, this program will also help you to achieve your goals.

How This Program Works

Welcome to the AG4 beginners programme.

In this program, every month of the year will teach you a new technique so you can build up your inner library of muscle building techniques.

The workouts should take under an hour. Cardio on top will extend the workouts over an hour and is optional, but try to adjust your lifestyle so that you are at least doing 7,000 - 10,000 steps per day if you choose not to do formal cardio.

If you have a very low step count job, then it is advisable to perform 15 - 30 minutes of cardio after your workout if possible for maximum results.

Equipment Required

- A gym membership.
- A set of resistance bands.

Video Guidance

Press the  button next to the exercises to access the video form of the exercises if you need help.

Warm Up

- 2 Minutes Exercise Bike or Any Cardio Machine
- 20 Banded Pull Aparts
- 10 Arm Circles Each Side

Month 2

FEBRUARY

Drop Sets

AG4 MENS · 3x PER WEEK

MONTH 2 TECHNIQUE

Drop Sets

On your final set of a marked exercise, instead of stopping when you hit failure, immediately reduce the weight by around 20–30% and keep going. Drop the weight again and repeat for 3 drops total. Aim for 8–10 reps at each drop. You will see a small reduction in reps each time — this is completely normal. This month, look out for the green tick marker on specific exercises and apply this technique to your last set only.

Month 3

MARCH

AG4 MENS · 3x PER WEEK

MONTH 3 TECHNIQUE

Matrix Sets (21's)

21's are where you divide each set into 7 mini repetitions. You do 7 partial repetitions in the bottom range of the movement, then with no rest into the top range of the movement for 7 partials, and then finally, the entire repetition for 7 full repetitions, totalling 21 total repetitions (21's). Apply this technique to the exercises marked with the green ticks. You will have to use a lower weight than you are used to.

Month 4

APRIL

AG4 MENS · 3x PER WEEK

MONTH 4 TECHNIQUE

Partial Reps

Partial reps are performed in the lower 25% of the range of motion: short, controlled pulses that maintain constant tension in the muscle. They are used at the end of a set, when full reps are no longer possible, to maximize muscle fatigue. This month, after reaching muscle failure in the marked exercises, perform 3 to 5 partial reps before lowering the weight. You can also perform partial reps with each rep of your set, doing 3 partial reps for every repetition. Try both methods often!

Experiment with both methods frequently this month! Use this technique only on the exercises marked with a green tick.

AG4 MENS · 3x PER WEEK

Month 5

MAY

AG4 MENS · 3x PER WEEK

MONTH 5 TECHNIQUES

Pause Reps

Pause reps involve holding the weight completely still at the most difficult part of the movement—usually at the bottom—for 3 to 4 seconds before continuing. This eliminates momentum, forcing the muscle to work under pure tension. This month, the marked exercises include a 4-second pause on every repetition. Use a slightly lighter weight than usual to compensate for the increased difficulty.

Use this technique only on the exercises marked with a green tick.

Workout A

AG4 MENS · 3x PER WEEK

Month 6

JUNE

AG4 MENS · 3x PER WEEK

MONTH 6 TECHNIQUE

Slow Reps

Slow repetitions involve controlling each phase of the movement with a tempo of 4 seconds on the lift and 4 seconds on the lowering of the weight. Think: 4 seconds up and 4 seconds down. This method increases time under tension, improves muscle control, and makes the muscle work harder during each repetition. Use this technique on every repetition this month. Slightly reduce the weight to maintain proper technique and controlled movement throughout the set.

Workout A

*Tempo for every exercise this month: 4 seconds up, 4 seconds down on every rep.
Reduce your usual weight slightly to stay in control.*

AG4 MENS · 3x PER WEEK

Month 7

JULY

AG4 MENS · 3x PER WEEK

MONTH 7 TECHNIQUE

Pre-Exhaust

Pre-Exhaust involves performing an isolation exercise immediately before a compound movement with no rest in between. This fatigues the target muscle first, ensuring it reaches maximum exhaustion during the compound exercise instead of letting other muscles do more work. A classic example is doing leg extensions before squats—your quads will already be burning when you start squatting, forcing the muscle to work harder. This month, some exercises will be marked as (PRE-EXHAUST). Perform the isolation exercise first and then move directly to the compound movement.

AG4 MENS · 3x PER WEEK

Month 8

AUGUST

AG4 MENS · 3x PER WEEK

MONTH 8 TECHNIQUE

Post-Exhaust

Post-exhaustion is the reverse of pre-exhaustion. You hit the compound movement first to recruit maximum muscle fibres, then immediately follow it with an isolation exercise to finish off the target muscle completely. For example, leg press followed immediately by leg extensions ensures the quads are fully worked even after the glutes and hamstrings have taken some of the load in the compound. This month, look out for exercise pairs marked (POST-EXHAUST) and move between them with zero rest.

AG4 MENS · 3x PER WEEK

MONTH 9 TECHNIQUE

Myo Reps

Myo-reps are a training method where you take a set close to failure, then rest for about 5–10 seconds and do 5 more reps. After that, you rest again for 5–10 seconds and do another 5 reps. You repeat this cycle around 3 times, or until you can't keep the reps clean anymore. You can use this technique on your last set of an exercise or every set, experiment with what works for you.

Use this technique only on the exercises marked with a green tick.

Month 10

OCTOBER

AG4 MENS · 3x PER WEEK

MONTH 10 TECHNIQUE

Pyramid Training

Pyramid training means adjusting your weight and reps across 4 sets in a structured pattern. An ascending pyramid starts lighter with higher reps and builds to heavier weight with lower reps — great for warming into a heavy movement safely. A descending pyramid starts heavy and works back down — good for pushing strength early when you are freshest. This month, green tick marked exercises follow a pyramid rep scheme.

Follow the rep numbers shown precisely.

Month 11

NOVEMBER

AG4 MENS · 3x PER WEEK

MONTH 11 TECHNIQUE

Run The Rack

The Run The Rack technique is where you finish your last set, and then keep pulling out the pin and switching to the next lowest weight and you continue doing repetitions without rest, and then everytime you fatigue, you pull out the pin and go one weight lower until you reach a weight of 0. You can do this on machines by pulling out the pin and setting a lower weight each time, or on the Dumbbell rack by picking up a lighter pair of dumbbells each time until you reach the lowest weight on the dumbbell rack. Use this technique on your very last set of the exercise.

Use this technique only on the exercises marked with a green tick.

DECEMBER

AG4 MENS · 3x PER WEEK

MONTH 12 TECHNIQUE

Tri Sets

Tri Sets chain three exercises together with no rest between any of them — only the time it takes to move between stations. This is one of the most intense techniques in the library. The idea is to keep switching to a slightly easier exercise as you fatigue, meaning the muscle stays under tension for far longer than a normal set. This month your sessions include one Tri Set finisher per workout. Hit each exercise to failure and move straight to the next. Only rest once all exercises in the Tri-Set are complete.

Equipment Modifications

This programme is designed around training at a well equipped gym, however here are some common modifications you can make if faced with limitations around specific exercises.

Barbell Exercises – Exercises such as the Barbell Row, Barbell Bicep Curl can be replaced by Dumbbell variations of those exercises.

Dumbbell Exercises – Exercises such as the Dumbbell Shoulder Press and Incline Dumbbell Bench Press can be replaced by Barbell variations of those exercises.

Assisted Pull Up Machine – The first point of call would be to use a heavy resistance band. Use a step or box to give yourself the height required to step into the band, this will help you to do pull ups.

However if this is too challenging, using a bar in a squat rack, set at chest height, can allow you to do Floor assisted Pull Ups where your buttocks and feet touch the floor with your knees bent at the start of every repetition. You can produce the same motion as a pull up. Finally, simply using a bench, a box or another stable raised surface underneath a pull up bar can help you to do Pull Ups. Keep your legs on the raised surface and use them to help you do the pull up by straightening your legs on the way up, and bending your knees on the way down. Select the option that works best for your skill level.

Rear Delt Machine – The Dumbbell Rear Delt Fly can be used as a replacement for this machine. I find the machine smoother and allows me to push to a greater intensity than dumbbells, so to match this without the machine I would use a Superset of Rear Delt Dumbbell Flys (15 reps) straight into Resistance Band Face Pulls (15 reps). This is a solid alternative to work your Rear Delts.

Lateral Pulldown – Hooking a resistance band to a surface above can act as a Lateral Pulldown. Simply doing a Band Pull Apart with a resistance band starting from over your head can also act as a Lateral Pulldown.

Triceps Pushdown / Triceps Behind The Head Extension – Instead of Cables, Resistance Bands attached to an overhead surface such as bar or Squat Rack, make for an excellent alternative for these exercises.

Barbell Squats – Dumbbell Squats or the Leg Press Machine is always an option to replace this exercise.

Years 2 And 3 Of Your Training

You have now completed **a year** of training. In your second and third year, I want you to apply all the 12 techniques you have learned in each month together in your workouts.

You can choose to stick to the 3 x A Week programme, but at this stage I suggest you graduate to a more advanced programme.

These 12 techniques have provided you with the variety in your training that top PT's in the world use.

Whatever programme you choose to move onto, I want you to pick at least 3 exercises per workout to apply these techniques too. You can even apply multiple techniques to the same exercise across 3 sets. For example, when you do Leg Extension Machine, you can do your first set with slow repetitions, your second with pause repetitions, and your final with partial repetitions.

Take control of your training and apply a variety of these techniques to your training, as well as continuing to learn new techniques in the next year.

In your second and third years, if cardio starts to get boring, consider learning a skill like boxing for cardio, doing exercise classes or doing Youtube workouts. We will move on to some variations of cardio workouts to improve your body and build you up to train like an athlete instead of doing casual cardio.

You can incorporate Sprints or Interval Training, and lots more which is covered in our next programme.

At this stage you may want to start learning gymnastics skills and doing outdoor workouts (calisthenics.) We are going to progress you to workouts that build more muscle.

The most important thing is to hit your protein targets, eat clean, and keep progressing your weights each week / month. Things will slow down in terms of the amount of weight you can load on the bar each session as you are not a beginner anymore, but keep going! We will show you ways to continue progressing through this slowdown in the next stages of our programme.

Keep pushing to feel a good pump in your workouts with the advanced techniques we have shown you, improve your lifts, and your aesthetic body will build day by day. You are off to a great start! Now lets take it to the next level.

Why Learn More?

Do you want to know the secret to those that stick in the gym?

They reach a level where they have a knowledge in their head of multiple ways to workout and push themselves. Because to improve in the gym, there is always a personal record to be found every session. How you improve is to always find that personal record each and every time you enter the gym. It can be as simple as doing 1 more repetition than last week on an exercise.

Records don't always have to be with weights or in the same style of working out. It won't always be with the same Zone 2 cardio you improve at each week. Your body will pick up tiredness over time if you overwork it with one style of cardio and constantly push that to the max.

If you just have a basic amount of techniques, you can only get so far. The same Zone 2 cardio is good, but what if you are short on time, or want to maximise your calorie burn but don't want to spend 2 hours on the treadmill, picking up overuse injuries?

What happens when you sense your body is tired, such as your lower body, do you have an upper body alternative for your cardio? What happens when you sense you are getting bored and need new ways to push or varied sports?

This is why building up your knowledge of different techniques will help you make the most out of your fitness. You become a person who works out as a lifestyle choice in many different ways, with the knowledge to adapt to the needs of your body and mind.

You will feel perhaps your legs are tired one day, so choose to do an upper body battle ropes or boxing workout instead of jogging.

You may wish to burn more calories and only have 10 minutes to do your cardio instead of 30, and therefore choose sprinting workouts instead to maximise calorie burn in that time and hit a different energy system entirely.

You may experiment with metabolic circuits which combine cardio with weights so you can burn calories whilst building muscle.

You may simply not feel like going to the gym, but know there's that one form of cardio or weights session that you absolutely love, so you choose to hit a record on that form of working out, which keeps you in the gym improving.

There's always a PR (Personal Record) to hit, but you need to be in the gym to hit it, enjoying yourself, and being able to know the options available to you based on different situations. It is important to have knowledge so you can find what you love in fitness, and awareness of when to make a change. Some people may love just one sport and style of workout their whole life, and others need variety. Some people get injured doing one style of workout for too long and need to make substitutions or slight programme changes to stay active.

This awareness is what separates those who stick in the gym and enjoy working out with those who don't. This awareness is what we teach in our Intermediate programmes.

Which Workout Plan To Pick – Men's

YEAR 1
BEGINNER

• AG BEGINNERS 3X A WEEK

• FULL BODY 3X A WEEK

YEAR 2 - 3
INTERMEDIATE

• AG INT 4 DAY A WEEK

• AG INT 5 DAY A WEEK

• FULL BODY 3X A WEEK

ATHLETE

• ATHLETE PROGRAMME

Year 1: For your first year of training, I suggest my Beginner programme as it is my most digestible programme for beginners at 3 x per week. Every month the programme covers a new technique to learn and add to your training. Full Body or 30 Minute workouts are both great choices.

Year 2 - 3: I suggest you run an AG Intermediate programme for either 4 or 5 days a week. This programme covers more advanced forms of cardio, and has you in the gym more, perfect if you want to enjoy the mental benefits of going to the gym 4 - 5 days a week. If it suits you better to stick to 3 days a week, you can also stick with a 3x a week full body.

Athlete / Years 3-5: I suggest you check out the 5 day AG Athlete programme.
