

AG4 WOMENS · 3x PER WEEK

Month 1

JANUARY

1 Year Of Programming

This is a year of programming for a 3 times a week Lower Only Programme for women.

Goals Of Program:

Designed to aesthetically improve your body composition rapidly and build a strong, pain free base for sports or everyday life, with good posture.

Training Approach:

This program uses a LOWER BODY ONLY approach in order to maximise Lower body growth. Some women are perfectly happy with the development of their Upper body and wish to focus strictly on developing their Lower body. This is valid and this program is perfect for this goal, leading to faster Lower body growth.

Who Is This For?

If you want to work out 3 times a week and build a stronger and better looking body, this is for you.

If you have around an hour to workout 3 times a week, then this is for you.

If you are looking to be strong, pain free, work on your posture, and build a strong foundation, this is for you.

This full body style is time efficient, and will build a strong foundation for sports or everyday life. You can use these workouts as a practitioner of sports to build foundational strength, muscle and posture that will help you further in your sport.

Or if you don't do sports and are simply looking to improve the way your body looks, this program will also help you to achieve your goals.

How This Program Works

Welcome to the AG4 beginners programme.

In this program, every month of the year will teach you a new technique so you can build up your inner library of muscle building techniques.

The workouts should take just under an hour. Cardio on top will extend the workouts over an hour and is optional, but try to adjust your lifestyle so that you are at least doing 7,000 - 10,000 steps per day if you choose not to do formal cardio.

If you have a very low step count job, then it is advisable to perform 15 - 30 minutes of cardio after your workout if possible for maximum results.

Equipment Required

- A gym membership.
- A set of resistance bands.
- A set of mini resistance bands.

Video Guidance

Press the  button next to the exercises to access the video form of the exercises if you need help.

AG4 WOMENS · 3x PER WEEK

Month 2

FEBRUARY

Drop Sets

AG4 WOMENS · 3x PER WEEK

MONTH 2 TECHNIQUE

Drop Sets

On your final set of a marked exercise, instead of stopping when you hit failure, immediately reduce the weight by around 20–30% and keep going. Drop the weight again and repeat for 3 drops total. Aim for 8–10 reps at each drop. You will see a small reduction in reps each time — this is completely normal. This month, look out for the green tick marker on specific exercises and apply this technique to your last set only.

A weight drop of 20 – 30% can be as simple as selecting the next pair of lighter dumbbells, or putting the pin one or two weights less on your exercise machine.

LOWER 1 — Glutes Focus

Warm Up -5 Minutes Treadmill, 10 Squats With Toe Touches .
Hip Flexor Stretch 30 seconds per Leg.

AG4 WOMENS · 3x PER WEEK

Month 3

MARCH

AG4 WOMENS · 3x PER WEEK

MONTH 3 TECHNIQUE

Supersets

A superset means performing two exercises back to back with zero rest in between. This month your workouts include agonist supersets — two exercises hitting the same muscle group — which are excellent for creating a deep pump and saving time. Look out for exercises marked (SUPERSET) and move straight from one to the next without putting the weights down. Rest only after both exercises are complete.

LOWER 1 — Glutes Focus

AG4 WOMENS · 3x PER WEEK

Month 4

APRIL

AG4 WOMANS · 3x PER WEEK

MONTH 4 TECHNIQUE

Partial Reps

Partial reps are performed in the lower 25% of the range of motion: short, controlled pulses that maintain constant tension in the muscle. They are used at the end of a set, when full reps are no longer possible, to maximize muscle fatigue. This month, after reaching muscle failure in the marked exercises, perform 3 to 5 partial reps before lowering the weight. You can also perform partial reps with each rep of your set, doing 3 partial reps for every repetition. Try both methods often!

Experiment with both methods frequently this month! Use this technique only on the exercises marked with a green tick.

LOWER 1 — Glutes Focus

AG4 WOMENS · 3x PER WEEK

Month 5

MAY

AG4 WOMENS · 3x PER WEEK

MONTH 5 TECHNIQUES

Pause Reps

Pause reps involve holding the weight completely still at the most difficult part of the movement—usually at the bottom—for 3 to 4 seconds before continuing. This eliminates momentum, forcing the muscle to work under pure tension. This month, the marked exercises include a 4-second pause on every repetition. Use a slightly lighter weight than usual to compensate for the increased difficulty.

Use this technique only on the exercises marked with a green tick.

LOWER 1 — Glutes Focus

AG4 WOMENS · 3x PER WEEK

Month 6

JUNE

AG4 WOMENS · 3x PER WEEK

MONTH 6 TECHNIQUE

Slow Reps

Slow repetitions involve controlling each phase of the movement with a tempo of 4 seconds on the lift and 4 seconds on the lowering of the weight. Think: 4 seconds up and 4 seconds down. This method increases time under tension, improves muscle control, and makes the muscle work harder during each repetition. Use this technique on every repetition this month. Slightly reduce the weight to maintain proper technique and controlled movement throughout the set.

AG4 WOMENS · 3x PER WEEK

Month 7

JULY

AG4 WOMENS · 3x PER WEEK

MONTH 7 TECHNIQUE

Pre-Exhaust

Pre-Exhaust involves performing an isolation exercise immediately before a compound movement with no rest in between. This fatigues the target muscle first, ensuring it reaches maximum exhaustion during the compound exercise instead of letting other muscles do more work. A classic example is doing leg extensions before squats—your quads will already be burning when you start squatting, forcing the muscle to work harder. This month, some exercises will be marked as (PRE-EXHAUST). Perform the isolation exercise first and then move directly to the compound movement.

LOWER 1 — Glutes Focus

Warm Up -5 Minutes Treadmill, 10 Squats With Toe Touches .
Hip Flexor Stretch 30 seconds per Leg.

AG4 WOMENS · 3x PER WEEK

Month 8

AUGUST

AG4 WOMENS · 3x PER WEEK

MONTH 8 TECHNIQUE

Post-Exhaust

Post-exhaustion is the reverse of pre-exhaustion. You hit the compound movement first to recruit maximum muscle fibres, then immediately follow it with an isolation exercise to finish off the target muscle completely. For example, leg press followed immediately by leg extensions ensures the quads are fully worked even after the glutes and hamstrings have taken some of the load in the compound. This month, look out for exercise pairs marked (POST-EXHAUST) and move between them with zero rest.

LOWER 1 — Glutes Focus

AG4 WOMENS · 3x PER WEEK

Month 9

SEPTEMBER

AG4 WOMENS · 3x PER WEEK

MONTH 9 TECHNIQUE

Myo Reps

Myo-reps are a training method where you take a set close to failure, then rest for about 5–10 seconds and do 5 more reps. After that, you rest again for 5–10 seconds and do another 5 reps. You repeat this cycle around 3 times, or until you can't keep the reps clean anymore. You can use this technique on your last set of an exercise or every set, experiment with what works for you.

Use this technique only on the exercises marked with a green tick.

AG4 WOMENS · 3x PER WEEK

Month 10

OCTOBER

AG4 WOMENS · 3x PER WEEK

MONTH 10 TECHNIQUE

Pyramid Training

Pyramid training means adjusting your weight and reps across 4 sets in a structured pattern. An ascending pyramid starts lighter with higher reps and builds to heavier weight with lower reps — great for warming into a heavy movement safely. A descending pyramid starts heavy and works back down — good for pushing strength early when you are freshest. This month, marked exercises follow a pyramid rep scheme. Follow the rep numbers shown precisely.

AG4 WOMENS · 3x PER WEEK

Month 11

NOVEMBER

AG4 WOMANS · 3x WEEK

MONTH 11 TECHNIQUE

Run The Rack

The Run The Rack technique is where you finish your last set, and then keep pulling out the pin and switching to the next lowest weight and you continue doing repetitions without rest, and then everytime you fatigue, you pull out the pin and go one weight lower until you reach a weight of 0. You can do this on machines by pulling out the pin and setting a lower weight each time, or on the Dumbbell rack by picking up a lighter pair of dumbbells each time until you reach the lowest weight on the dumbbell rack. Use this technique on your very last set of the exercise.

Use this technique only on the exercises marked with a green tick.

LOWER 1 — Glutes Focus

AG4 WOMENS · 3x PER WEEK

Month 12

DECEMBER

AG4 WOMENS · 3x PER WEEK

MONTH 12 TECHNIQUE

Tri Sets

Tri Sets chain three exercises together with no rest between any of them — only the time it takes to move between stations. This is one of the most intense techniques in the library. The idea is to keep switching to a slightly easier exercise as you fatigue, meaning the muscle stays under tension for far longer than a normal set. This month your sessions include one Tri Set finisher per workout. Hit each exercise to failure and move straight to the next. Only rest once all exercises in the Tri-Set are complete.

Easy Days

I want to introduce the concept of easy days. We all have jobs or responsibilities. We all have times where our bodies are simply tired. We all have times where we probably won't go to the gym unless it's made to be a simple choice for us. In these situations, you can implement easy days.

These are 30 minute days designed to just get you in the gym to be consistent, they will still grow you, but they are only 3 exercises as not to be intimidating workouts that you have to "figure out" from a long listed timetable.

They are just quick simple days to build into your muscle memory, go in and use these days often when you feel drained. A 30 minute quick and effective workout is better than no workout in nearly all cases despite severe injury, or if you ran a marathon the day before, this fact remains true.

Your Easy Day:

Barbell Squat 3 sets x 10
Romanian Deadlift 3 sets x 10
Treadmill - As long as you like.

Bring your favorite show, movie or audiobook on your phone and enjoy a low pressure day.

Equipment Modifications

This programme is designed around training at a well equipped gym, however here are some common modifications you can make if faced with limitations around specific exercises.

Barbell Exercises – Exercises such as the Barbell Squat and Barbell Deadlift can be replaced by Dumbbell variations of those exercises.

Dumbbell Exercises – Exercises such as the Dumbbell Squat and Dumbbell Deadlift can be replaced by Barbell variations of those exercises.

Barbell Squats – Dumbbell Squats or the Leg Press Machine is always an option to replace this exercise.

Step Ups – You can perform Step Ups on an Assisted Pull Up Machine with your foot on the pad pushing down.

Hip Thrust – Barbell Hip Thrusts are always replaceable with Machine Hip Thrusts.

Hip Abductor Machine – You can step into super heavy mini resistance bands and wrap them just above your knees to perform burnouts of your Hip Abductors.

Years 2 And 3 Of Your Training

You have now completed **a year** of training. In your second and third year, I want you to apply all the 12 techniques you have learned in each month together in your workouts.

You can choose to stick to the Lower Body or Full Body 3 x A Week programmes, or graduate to a more advanced programme.

These 12 techniques have provided you with the variety in your training that top PT's in the world use.

Whatever programme you choose to move onto, I want you to pick at least 3 exercises per workout to apply these techniques too. You can even apply multiple techniques to the same exercise across 3 sets. For example, when you do Leg Extension Machine, you can do your first set with slow repetitions, your second with pause repetitions, and your final with partial repetitions.

Take control of your training and apply a variety of these techniques to your training, as well as continuing to learning new techniques in the next year.

In your second and third years, if cardio starts to get boring, consider learning a skill like boxing for cardio, doing exercise classes or doing Youtube workouts. We will move on to some variations of cardio workouts to improve your body and build you up to train like an athlete instead of doing casual cardio.

You can incorporate Sprints or Interval Training, and lots more which is covered in our next programme.

At this stage you may want to start learning gymnastics skills and doing outdoor workouts (calisthenics.) We are going to progress you to workouts that build more muscle.

The most important thing is to hit your protein targets, eat clean, and keep progressing your weights each week / month. Things will slow down in terms of the amount of weight you can load on the bar each session as you are not a beginner anymore, but keep going! We will show you ways to continue progressing through this slowdown in the next stages of our programme.

Keep pushing to feel a good pump in your workouts with the advanced techniques we have shown you, improve your lifts, and your aesthetic body will build day by day. You are off to a great start! Now lets take it to the next level.

Which Workout Plan To Pick – Women's

YEAR 1
BEGINNER

• LOWER ONLY 3X A WEEK

• FULL BODY 3X A WEEK

YEAR 2 - 3
INTERMEDIATE

• FULL BODY 3X A WEEK

• 5 DAY A WEEK

ATHLETE

• ATHLETE PROGRAMME

Year 1: For your first year of training, I suggest my Lower Only programme as it is my most digestible programme for beginners at 3 x per week. Or the Full body 3x a week programme. Every month the programme covers a new technique to learn and add to your training.

Year 2 - 3: I suggest you check out the 5 day a week programme. This programme covers more advanced forms of cardio, and has you in the gym more, perfect if you want to enjoy the mental benefits of going to the gym 4 - 5 days a week. If it suits you better to stick to 3 days a week, you can also stick with the tried and tested 3x a week full body and lower only programmes as long as you keep applying all 12 techniques you learned to every workout regularly.

Athlete: I suggest you check out the womens Athlete 5 times a week programme.
